

From the provision of the IT infrastructure and conferencing platform required by customers to host conferences on their own network, to conferencing applications for the latest handheld mobile devices, Lindenbaum is a single source of conferencing solutions for carriers and conference service providers.

FLEXIBLE CLIENTS

Freedom in the choice of tools used to manage conferences and access to the industry's most advanced web-based tools for premium services.

User Interfaces from Lindenbaum provide end-users with the choice of how to book and manage their conference calls using their preferred communication channel, for instance through the web, Outlook™, on their BlackBerry®, iPhone® or iPad®. User Interfaces for service providers enable a range of premium services such as operator support, web management tools and the Lindenbaum Operation Support System.

CONNECTORS AND APIS

Lindenbaum Connectors assist in the integration of feature-rich conferencing services with the latest business applications.

Lindenbaum Conferencing Connectors provide the latest application-programming interfaces (APIs) to help seamlessly integrate conferencing capabilities in mobile, web-based or PC-based applications. Alternatively, the company's WebEx Connector can help service providers bring the benefits of Lindenbaum Audio Conferencing to WebEx users.

CONFERENCING APPLICATIONS

From easy-to-use, instant conferences to operator-supported event conferences, Lindenbaum has it covered.

Lindenbaum applications support a range of conference formats with options for seamless integration of online presentations or collaboration. From simple and cost-efficient Instant Conferencing solutions to operator-supported, interactive Event Conference Calls, Lindenbaum has developed a rich set of products and services to facilitate business communication. All applications are fully reseller-enabled to support additional business cases in cooperation with partners.

MEDIA SERVER

The advanced carrier-grade, multipoint platform server that grows with customers' needs.

The Lindenbaum Media Server unifies the TDM and IP world and therefore enables a smooth migration from TDM to IP. Its flexible structure provides customers with a solution that grows with their needs: starting, for example, with 240 lines and a pure audio conference application, the capabilities of the system can be easily extended using additional media processing modules and software licences. A globally-distributed media server cluster helps optimise voice traffic from around the world.

INFRASTRUCTURE TECHNOLOGY

Lindenbaum is able to supply, on request, the certified infrastructure technology required to run its conferencing services.

Lindenbaum has access to several certified 3rd party infrastructure components such as firewalls, blade servers, operating systems, and MSPPs to provide the maximum of reliability, scalability and security for its customers' conferencing services. All certified 3rd party infrastructure technology can be supplied by Lindenbaum on request.

SERVICES AND OPERATIONS

Lindenbaum professional services enable service providers to launch more profitable and innovative services for their customers.

Following the delivery of a conferencing system, Lindenbaum remains fully committed with the same passion, experience and dedication to ensure the highest standards of maintenance and technical support.

Its highly experienced staff operate on a 24/7 basis, servicing clients via phone, e-mail and on-site.

A LEADER IN COMPREHENSIVE CONFERENCING SOLUTIONS

The range of telephone & web conferencing and virtual dialog products available from Lindenbaum GmbH allows it to develop the optimal and most cost-effective solution for its customers. Indeed, as telecommunications service providers focus more clearly on their individual part of the value chain, Lindenbaum delivers conferencing solutions customized to their needs – from pure conferencing technology to complete solutions, including IT infrastructure, operations and maintenance.

For business conferencing, Lindenbaum has developed a range of audio- and web-based systems, drawn from many years of experience with its service provider customers, that are easy to use and always available. The system's scalability allows both an extension of its capacity – up to a global level if required – and its functionality. Emphasis is also placed on the seamless integration of conferencing into existing business processes, with the development of several tools and integration interfaces, including plug-ins for Groupware (MS Outlook®) and mobile conference initiation from a smart phone, amongst others.

At the core of Lindenbaum technology is its Media Server, an advanced carrier-grade multipoint platform for real-time conferencing for IP and TDM networks and protocols.

FOR CARRIERS AND CSPs

LINDENBAUM GMBH – CREATING NEW LOCATIONS FOR BUSINESS

The company name Lindenbaum is synonymous in English with the oak tree – a place for meetings, negotiations and the exchange of news throughout the centuries. In today's world of the Internet and Social Media, Lindenbaum GmbH enables new and efficient locations for business, independent of location, through feature-rich business conferencing solutions based on the Lindenbaum web and voice platform.

Its communication services for international service providers, including several renowned carriers, and middle- and large-sized companies are based on both innovative ideas and state-of-the-art technology. All telephone- and web-conferencing applications provided by Lindenbaum are scalable and adaptable to customer requirements, creating truly customised solutions.

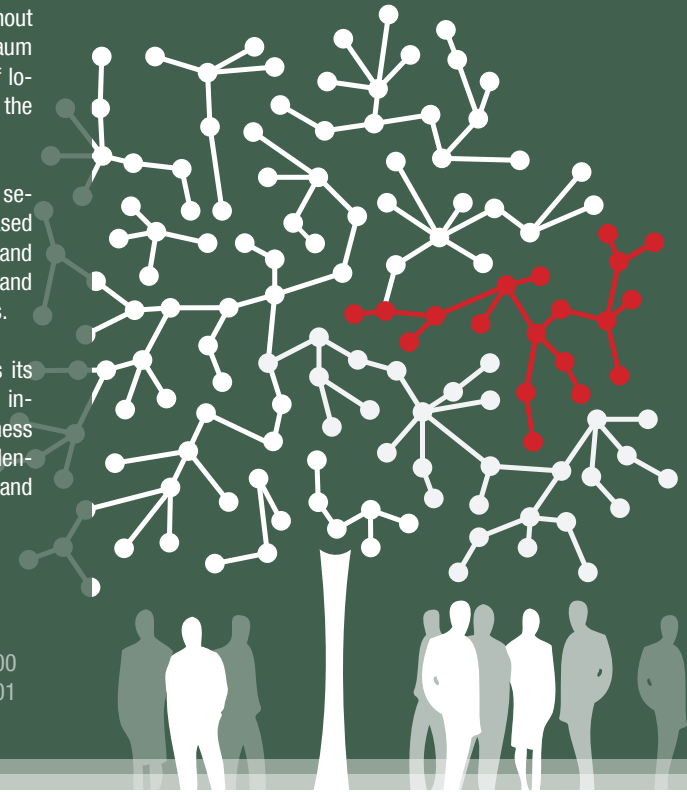

Beyond the provision of its conferencing solutions, Lindenbaum offers its customers comprehensive and professional after-sales support in the integration of its systems into existing technical infrastructure and business processes. Moreover, close collaboration with partners ensures that Lindenbaum solutions remain in line with changing customer requirements and emerging technological trends.
